Sample Search Gamification

It has happened to every musician, you know all of your sounds and are looking for something new. You also know that searching for that new sound is a slow and exhausting process that can cost quite some money and kill your inspiration within seconds. But what would it be like if this process would be a fun, free and inspiring quest?

The app; Wingman

Wingman is a inspiring and stimulating app that allows users to Search for samples in a very unique way. A musician simply goes outside to discover new sounds on the go. These samples are recorded by other musicians who record and leave the samples on the street. Every other user will be able to listen to those samples on the exact spot where they were created. After the journey that the now inspired musician has made, He will find his preferred samples on his desktop. There Wingman allows users to automatically sort their samples the way they want it to. After they have organised the samples as they like, they can easily find them and just drag and drop them in their DAW.

Demonstration

Here you will see a little demonstration of the Wingman app. The first screen you see is the map where you are able to search and listen to recorded samples. Then a screen with recent sample downloads will open, here you will see a large orange button. This button lets you set up filters for your search, as you fill in your preferred filters, the map will slowly adjust to your needs. As you get back to the map you will see samples on the map. When you are close enough to the samples, you will be able to listen to the samples. Do you like the sample? Hit save!

Recording your own samples

Recording your own samples is easy! Just press and hold the record button on the bottom of the screen. When you are done recording, release. Now you will be able to name the sample. When you have found the perfect name for your sample, just swipe the mic to the left, and, saved! You can find your samples in the sample menu via your account. Here you will be able to add a suitable icon and discription. This way others will easily get to know the thoughts behind your

sound. Done filling in the sample, click on 'put on map' to release your sample onto the streets.
